### Must Read before you begin Migration

- Prior to starting the CA4K<sup>TM</sup> data migration, you must make certain you have Full Administrator privileges without any restrictions. This includes lowering the UAC settings to "Never Notify" and verifying there are no domain restrictions. Failure to do so, will result in migration errors.
- The CA4K<sup>™</sup> Data Migration utility is designed to migrate Configuration Data and Event Data from a CardAccess 3000 database (Version 2.9.88 and 2.11.x) to CA4K<sup>™</sup> databases. If the CardAccess 3000 database is earlier than V2.9.88, you must send it into Continental Access to be updated, and there will be an upgrade fee. If your version of CardAccess 3000 is V2.9.88 or later, you can perform this procedure on the CA4K computer using the CA4K<sup>™</sup> Data Migration utility.
- It is highly recommended to use the latest version of CA4K, including any service packs that might be available.
- The CA4K<sup>TM</sup> Data Migration utility is installed by default during the CA4K<sup>TM</sup> **Complete Install** installation. It can be found under "All Programs".
- The CA4K requires strong passwords for all operators. During the Data Migration, the default admin account password in CA3000 will be changed to "admin@4k" and all other CA3000 operator passwords will be changed to "user@4k".
- This document covers two type of Migrations. The first type is the "All Data" migration. The "All Data" migration must be performed first and the CA4K™ live configuration and live Events databases should be used as the destination databases. The second type of migration is "Events and Audit" Logs only. For this type of migration, a CA4K™ Archive events database should be used as the destination database. Refer to the associated steps for the migration type you wish to perform.
- If you are moving CardAccess 3000 databases over to the CA4K computer, there are multiple methods to detach the databases on the CardAccess 3000 computer. The first method is to use the CA3000 Database Utility (CADButils) in the CardAccess 3000 software and detach the databases. The second method is to go into Services on the CardAccess 3000 computer and STOP SQL. Once the MSSQL (SQL) service is stopped, you can copy the files out of the Database folder under the CardAccess3000 folder. Please remember to restart the SQL service after all the files are copied. After the database files are copied over to the CA4K computer, they must be attached into the CA4K SQL server.

Very Important: DO NOT PAUSE THE SQL SERVICE TO COPY THE DATABASE FILES. **YOU MUST STOP IT.** 

• Prior to moving the CA3000 database files over to the CA4K computer, it is recommended to create a folder on the "C" drive of the CA4K computer, and give it a descriptive name (ex. CA3KDBs). Upon creating the folder, you must copy the CA3000 live database files into it, and also one or more CA3000 archive database files into it. After copying the CA3000 databases over, you must attach the CA3000 databases to the SQL Server on the CA4K computer, using the CA4K Dbutils.

#### **Overview**

This document provides a step by step procedure of a CardAccess 3000 Data Migration to CA4K<sup>TM</sup> databases. Prior to starting the Data Migration, you must verify the CA4K<sup>TM</sup> software has been previously installed and the five default databases have been created. This will confirm that SQL is installed and functioning correctly.

### **System Requirements**

#### **Ensure Recommended Server Requirements are met**

Make sure that the computer meets the specifications that are documented in the "CA4KTM System Requirements" document.

## **Verify Full Administrator Permissions**

The Data Migration utility requires Full Administrator permissions. Failure to provide these permissions will result in Data Migration and SQL errors.

### **Prerequisites**

- A functional CA4K<sup>TM</sup> Complete Install installation
- One or more CardAccess 3000 V2.9.88 or V2.11.x databases to be migrated
- CA4K<sup>TM</sup> databases (Destination Databases)

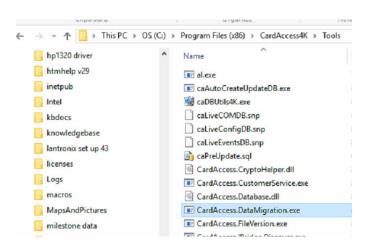

### **Data Migration Steps**

**NOTE**: The steps in this document are separated into two types of Migrations. The first is "**All Data**" and the second is "**Events and Audit Log Only**". The "All Data" migration must be performed first. Migrating "Events and Audit" Logs only are optional. Refer to the associated steps for the migration you wish to perform.

1. After the CA4K<sup>TM</sup> has been installed, the CardAccess Data Migration utility can be found under All **Programs**. To launch the CardAccess Data Migration utility, click the CardAccess Data Migration icon.

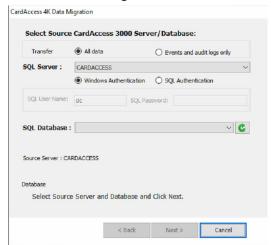

The CardAccess Data Migration utility can also be found in the CardAccess4K/tools folder. To launch the Data Migration utility, click CardAccess.DataMigration.exe.

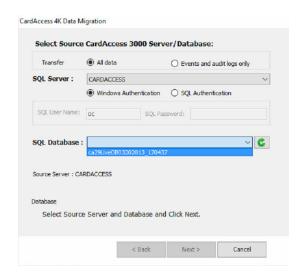

# "All Data" Migration

3. After the CardAccess Data Migration utility launches, the **Select Source CardAccess 3000 Server/Database** screen will display.

Note: For this demonstration, leave the default setting to Transfer All data.

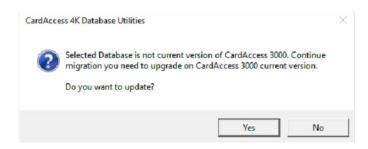

NOTE: Prior to performing the Migration, the CA3K source databases must be attached to SQL Server on the CA4K computer.

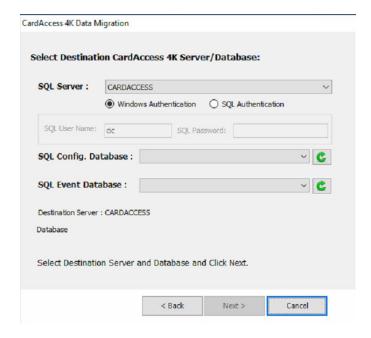

5. If the selected Source Database is not V2.11.84, and is at least V2.9.88, you will be prompted to update the database. Click **Yes** to update the database to V2.11.84 from V2.9.88.

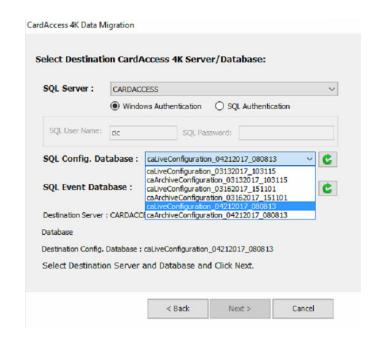

**NOTE**: If the CardAccess 3000 database is not V2.9.88 or later, it must be sent to Continental Access to be updated to at least V2.9.88, prior to migrating it. There will be a fee charged for this.

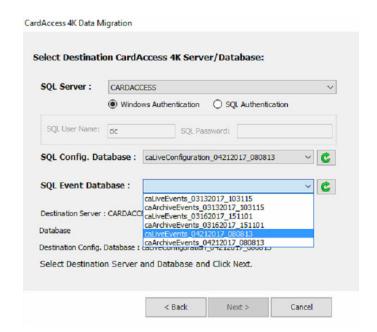

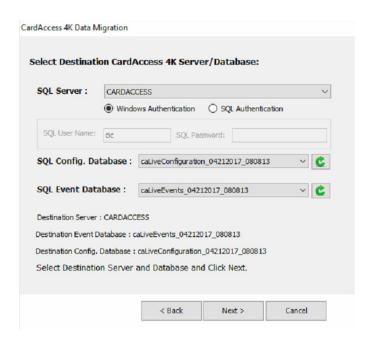

6. After clicking **Next**, select the **Destination** CA4K<sup>TM</sup> databases. These CA4K<sup>TM</sup> databases should be a **Live Configuration** and **Live Events** databases. After they are selected, click **Next**.

Note: Refer to the next 4 screenshots.

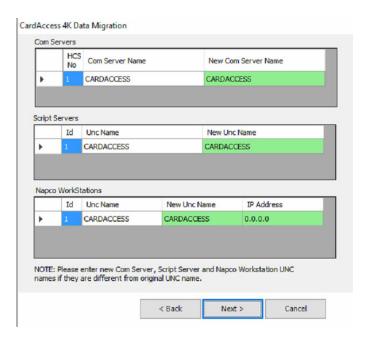

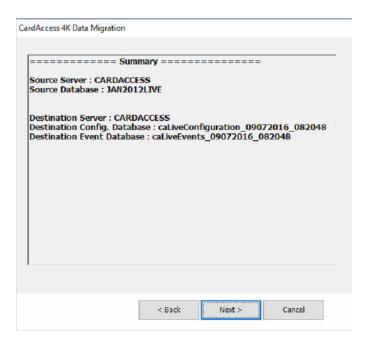

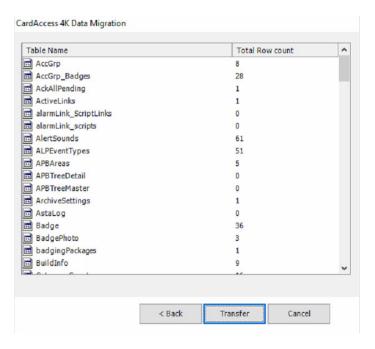

7. After clicking **Next**, the **UNC Name** screen will display. If any names or IP Address needs to be changed, edit the green fields to reflect the new Names and IP address. Click **Next**.

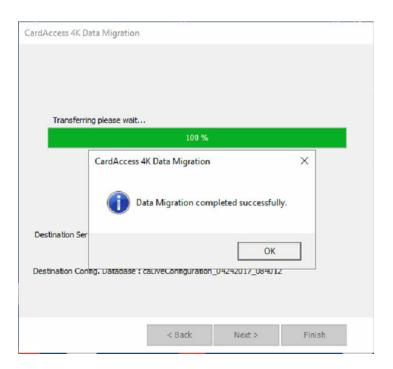

8. The CA4K<sup>TM</sup> Data Migration Summary screen displays. Click Next.

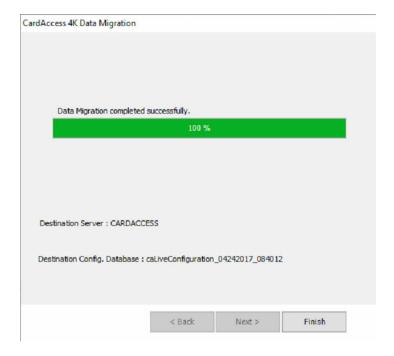

9. The **Table Names/ Total Row Counts** form displays. Review the tables and row counts that will be transferred. If all looks good, click **Transfer**.

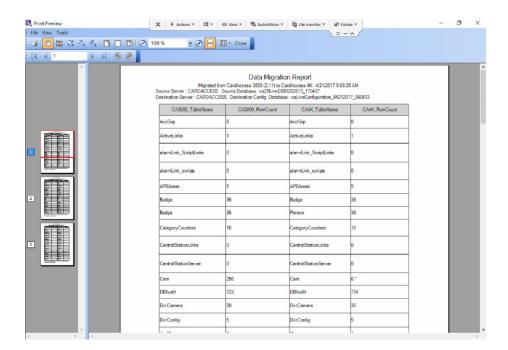

10. After the **All Data** transfer is complete, the **Data Migration completed successfully** screen displays. If any **UNC Names** were updated, a message box will display. Click **OK**.

11. After clicking OK, the Data Migration completed successfully screen displays. Click Finish.

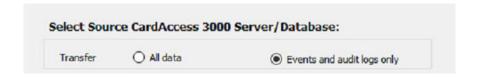

12. After clicking **Finish**, you will be prompted with the option to view the **Data Migration Report. Click Yes** to view the report. This report will list the tables and counts of records migrated to the CA4K<sup>TM</sup> databases. Verify the tables and counts compare to the report in in step 9. The tables noted with asterisks, might show a different value.

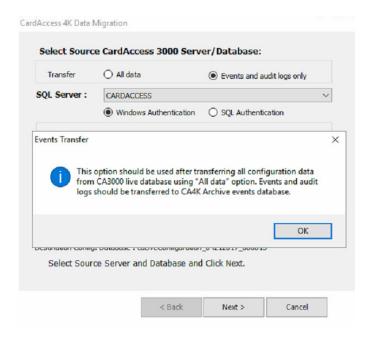

## "Events and Audit Log Only" Migration (Optional)

NOTE: The destination database used for this migration should be a CA4K<sup>™</sup> Archive events database. The following steps must be performed after an "All data" transfer is complete.

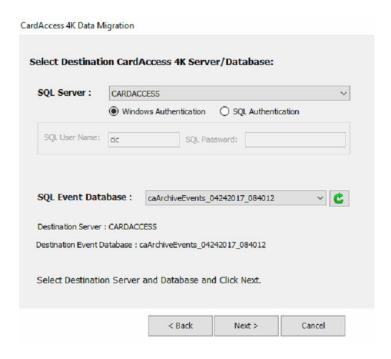

- 13. Launch the Data Migration Utility if it's not already launched.
- 14. Select Transfer Events and Audit Logs only.

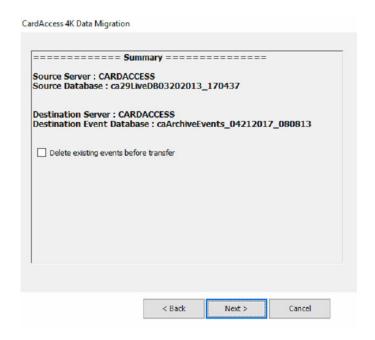

- 15. Upon clicking **Transfer Events and Audit Logs only**, the **Source SQL Server and Database** screen will display. In addition to this screen, an **Events Transfer** Information box will display. Click **OK** on the information box.
- Select the CardAccess 3000 Source SQL Server and Database you are migrating the events from. Click Next.

17. Upon clicking Next, the **Destination SQL Server and Database** screen will display. Select a **CA4K<sup>TM</sup> Archive Events Destination Database**. Click **Next**.

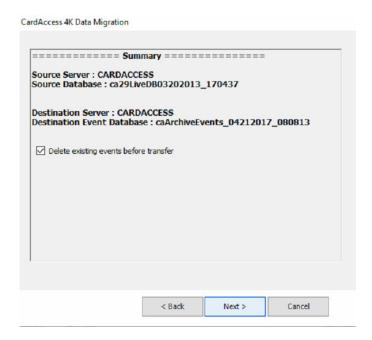

18. Upon clicking Next, an Events Transfer Summary screen will display.

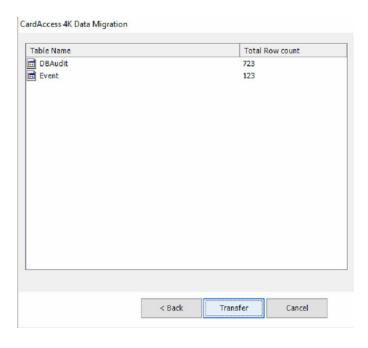

NOTE: If you wish to delete all the existing events currently in the destination database, select **Delete existing** events before transfer. Click **Next**.

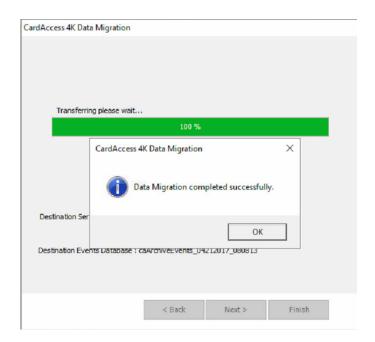

Warning – Be very careful not to delete events that you do not have a backup of.

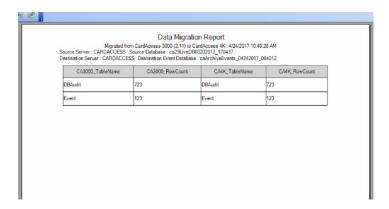

19. A screen will display with the **Total Row Counts** for the **DBAudit** and **Event** tables that will be transferred. Click **Transfer**.

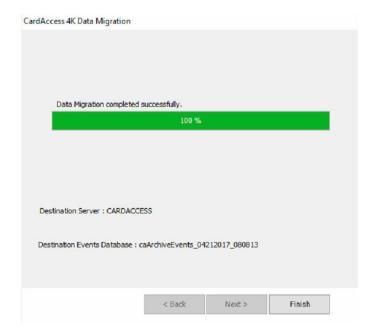

20. A progress bar will display while transferring the Events. After the transfer of **Events** and **Audit Log** are complete, the **Data Migration completed successfully** screen will display. Click **OK**.

- 21. After clicking OK, you will be prompted with the option to view the Data Migration Report. Click Yes.
- 22. Upon clicking Yes, verify the tables and counts compare to the report in step 19.

23. Close the Data Migration Report. The Data Migration completed successfully screen displays.

- 24. Click Finish.
- 25. Upon clicking **Finish**, a message box will display that **All Services must restarted**. Click **Yes** to restart all Services.

# **NOTES:**
